Sample Questions and Their Answers for Holt Geometry Chapter 8A

Below are some representative questions along with detailed solutions to help you prepare.

Question 1: Identifying Inscribed and Central Angles

Given a circle with an inscribed angle measuring 40°, find the measure of the intercepted arc.

Answer:

The measure of an inscribed angle is half the measure of its intercepted arc.

Solution:

- Inscribed angle = 40°
- Intercepted arc = 2 × 40° = 80°

Key Point:

The intercepted arc is 80°.

Question 2: Tangent and Secant Theorem Application

In a circle, a tangent and a secant intersect outside the circle. The tangent segment measures 10 units, and the secant segment from the external point to the far intersection point measures 18 units. Find the length of the external secant segment from the external point to the nearer intersection point.

Answer:

Using the Tangent-Secant Power Theorem:

If a tangent segment and a secant segment are drawn from a point outside a circle, then:

$$ \text{tangent}^2 = \text{external secant segment} \times \text{whole secant segment} $$

Let x be the length from the external point to the nearer intersection point on the secant.

Then:

$$ 10^2 = x \times 18 $$

$$ 100 = 18x $$

$$ x = \frac{100}{18} = \frac{50}{9} \approx 5.56 $$

Key Point:

The external secant segment measures approximately 5.56 units.

Question 3: Calculating Arc Measures

A chord in a circle subtends an inscribed angle of 70°. Find the measure of the arc intercepted by this angle.

Answer:

Using the inscribed angle theorem:

Inscribed angle = half the measure of its intercepted arc.

$$\text{Arc} = 2 \times 70^\circ = 140^\circ$$

Key Point:

The intercepted arc measures 140°.
